

# Want to take the headache out of selling Sudafed?

The most efficient, effective way to track sales of restricted medicines as mandated by federal and state anti-meth laws

Increases customer satisfaction and traffic to your pharmacy by providing a fast and easy sales transaction

Offers an up-to-date compliance assessment to ensure your pharmacy is recording all data required by your state

Provides digital capture and storage of the required customer signature so that no paper log must be maintained

## **PharmaTrack®**

PharmaTrack is a solution designed to improve the process of selling pseudoephedrine-based cold and allergy medicines like Sudafed and Claritin D that are restricted by federal and state anti-meth laws.

It enables pharmacies to reclaim the valuable time currently lost by manually recording and tracking each pseudoephedrine sale. Automated recording offers speed and convenience that improves customer satisfaction.

PharmaTrack eliminates log books, paper signature retention and manual reporting by electronically collecting all government-required information and storing it in a secure, encrypted format. Using the SecureTouch Advanced Modular terminal, cashiers can automatically capture customer ID information and the amount of pseudoephedrine sold. A complete record - including cashier information, time/date of the sale, and product purchased - is then stored in the PharmaTrack database.

***Simplify cold medicine sales and improve customer service - order PharmaTrack today!***

# PharmaLock®

PharmaLock offers enhanced security for the pharmacy door and controlled substance cabinets. It ensures only authorized individuals gain access to these restricted areas, and protects all data collected at the device using advanced encryption.

Utilizing biometric identity verification, PharmaLock improves safety and convenience because each authorized employee is uniquely enrolled and cannot lose their credentials nor share them with anyone else.

- Offers fast and easy access control
- Eliminates lost, borrowed or forgotten keys
- Provides superior security and convenience
- Creates a transaction audit trail including the employee's digital signature (finger image)

The same SecureTouch Advanced Modular device that operates PharmaTrack can also be used for PharmaLock, thereby providing a substantial return on investment.

## PharmaTrack and PharmaLock

using **SecureTouch Advanced Modular...**

### **SecureTouch Advanced Modular™**

can also process credit/debit transactions as a point-of-sale terminal.

- Dynamic LCD graphical display screen and 20-key keypad
- Bi-directional magnetic card reader
- 1D and 2D barcode reader with image capture functionality
- Optical finger image reader (*PharmaLock*)
- Ample 32 Mbytes SDRAM memory
- Small footprint (8.8 x 6.3 x 1.9 inches / 1 lb. 10oz.)
- Additional functional modules are available to enhance your solution including a facial camera, a thermal printer and a document scanner
