## **Biometric Access Company Introduces Electronic Pseudoephedrine Sales Logging System for Pharmacies**

***PharmaTrack™ Improves Pharmacist Productivity when Logging Medication Sales to Comply with Federal and State Regulations and to Combat Methamphetamine Production***

**ROUND ROCK, TX (May 2, 2008)** – Biometric Access Company (BAC) today announced availability of a new solution, PharmaTrack, to automate the pseudoephedrine sales logging process that is required of pharmacies by federal and state anti-methamphetamine laws.

Pharmacies are mandated to record pseudoephedrine-based medicine sales to customers, and PharmaTrack improves the process of selling these products by electronically capturing all required sales information and storing it in a secure, encrypted format.

“The tracking of pseudoephedrine sales is a proven way to combat meth production and make our communities safer,” said Ron Smith, president and CEO of BAC, “but creating manual logbooks is very time consuming for the pharmacy staff, and rudimentary data files are not an effective method given the technology available today. PharmaTrack offers greater accuracy of the information collected, provides greater flexibility for data aggregation, and improves pharmacy productivity by providing a significantly faster sales transaction.”

With PharmaTrack, complete data logging for most transactions takes less than 30 seconds. The PharmaTrack terminal enables automatic capture of required customer ID information from a driver license using its magnetic stripe or barcode. The product information is also logged automatically by scanning its UPC. A complete record of this data, along with the time/date of purchase and the clerk ID number, is then saved to the pharmacy's PharmaTrack database. PharmaTrack also offers an up-to-date federal and state law compliance assessment through a nationwide system service. In addition, it can be used to track other pharmaceutical purchases for use in prescription management programs.

“The use of PharmaTrack benefits all parties,” said Smith. “It provides pharmacies greater efficiency and security, and it offers consumers a faster, easier purchase experience and it enables law enforcement to better monitor frequent purchasers.”

PharmaTrack will be demonstrated by BAC at the Food Marketing Institute's (FMI) MARKETECHNICS® 2008 trade event being held May 4-7, 2008 at the Mandalay Bay Convention Center in Las Vegas. BAC's pharmacy solutions were selected by FMI to be featured in the Heath & Wellness Tour taking place during the conference. Additional information about the solution is available at [www.biometricaccess.com/pharmatrack](http://www.biometricaccess.com/pharmatrack).

### ***About Biometric Access Company***

Biometric Access Company (BAC) provides innovative yet practical system solutions that improve data management and transaction processing. Optional ID verification is available through our advanced biometric technologies. As the sole proprietor of our SecureTouch® products, BAC designs, develops, manufactures and markets several hardware and software applications to provide complete user solutions. Founded in 1996 and headquartered in Round Rock, Texas, BAC is a privately-owned company. Additional information about BAC and SecureTouch products is available at [www.biometricaccess.com](http://www.biometricaccess.com). #####
